

MONKEYPOX DASHBOARD ANALYSIS

TOTAL NUMBER OF CONFIRMED CASES: 61,014

DATA ENTRY DATES
18/05/2022 - 15/09/2022

MONKEYPOX

- Monkeypox is caused by the monkeypox virus, a member of the Orthopoxvirus genus in the family Poxviridae.
- It is transmitted to humans through close contact with an infected person or animal (via contact with lesions, body fluids, respiratory droplets), or with material contaminated with the virus.
- Symptoms usually lasts for 2 to 4 weeks.

KEY INSIGHTS

- The most common mode of testing for the Monkeypox virus is via RT - PCR fully known as the reverse transcription-polymerase chain reaction.
- The country with the highest number of cases is the United States of America with 17,336 confirmed cases.
- Most of the confirmed cases were not hospitalised.
- Most of the confirmed cases are men.
- Although 74% of the confirmed cases ended in death, the outcome dataset was not enough to get an adequate analysis.
